Hyderabad Telangana, India

SUMMARY

I am an AI/ML Engineer in training with hands-on experience in building real-time applications using Python, OpenCV, Deep Learning, and NLP. My foundation in Electronics & Communication Engineering coupled with my ongoing B.Tech studies in Artificial Intelligence & Machine Learning allows me to approach AI solutions from a systems-level perspective. I have successfully enhanced projects in computer vision, speech analytics, and full-stack AI applications. I am eager to contribute my skills to impactful projects in the AI/ML domain

EXPERIENCE

Founder & AI Developer – AIVA Freelancia Startup Platform

AIVA Freelancia, Hyderabad

2025 – Present

- Built a 2-in-1 AI freelancing platform combining a multilingual AI assistant with a startup service website.
- Developed 5+ responsive frontend pages using HTML, CSS, and JavaScript across Home, Services, Portfolio, Contact, and AI Assistant sections.
- Created 4+ service categories covering AI chatbots, automation, portfolio websites, and digital business solutions.
- Structured 3 client-facing workflows for service discovery, project browsing, and contact-based lead generation.

EDUCATION

B.Tech

Artificial Intelligence & Machine Learning

ICFAI Foundation for Higher Education,
Hyderabad

Diploma

Electronics & Communication Engineering

Holy Mary Institute of Science & Technology,
Hyderabad

KEY ACHIEVEMENTS

Successfully delivered multiple real-world AI projects including a real-time AI chat assistant and emotion detection system

LANGUAGES

- English
- Hindi
- Telugu

SKILLS

- GitHub
- Python
- Deep Learning
- NLP
- HTML
- CSS
- Flask
- Streamlit
- Pandas
- VS Code

PROJECTS

Personal AI Study Assistant (RAG)

- Built a RAG pipeline that lets you chat with your own study materials — PDFs, textbooks, and lecture notes — handling everything from document chunking and embedding generation to vector storage in ChromaDB for fast, accurate retrieval.
- Integrated LLM-powered Q&A on top of the retrieval layer to generate summaries, flashcards, and exam-focused content from your documents, with a knowledge base designed to grow as you add new material over time.

AIVA – AI Visionary Application

AI Agent & Freelance Startup Platform

- Built a dual-purpose platform that pairs a multilingual AI assistant with a freelance service site, giving clients one place to explore offerings, chat with the assistant, and browse past projects.
- Designed and improved all frontend pages in HTML, CSS, and JavaScript — keeping the experience responsive and intuitive across services, portfolio, and user interaction sections.

Global Terrorism Dashboard

- Created an interactive analytics dashboard visualizing global terrorism data with filterable charts and insights
- Implemented data processing pipelines and visualizations using Python libraries

Real-time AI Chat Assistant

- Built a conversational AI agent for English Springs using Open AI's Real time API
- Implemented seamless voice interaction with low-latency Web Socket communication for real-time responses
